Summary

Backend developer and Information Technologies student with 3+ years of experience building web applications and real-time systems, with a strong cybersecurity background. I specialize in backend development with Node.js and Python, API design, and secure systems architecture, having developed production-ready systems for thousands of users.

Professional Experience

Backend & Web3 Developer

Moonstruck | Belgrade, Serbia (Part-time, Remote) | Dec 2022 - Nov 2025

- Developed and maintained backend systems for various client projects, including a crypto portfolio management platform and hiking trail application
- Developed Web3 features such as NFT minting systems, soulbound tokens, and POAP certificates on Ethereum and Polygon networks
- Mentored a team of interns working on an educational platform for Web 2.5 Academy, providing technical support and code reviews
- Taught JavaScript basics at the Web 2.5 Academy, a course organized by Moonstruck, Serbia Innovates, and USAID
- Performed code reviews with emphasis on security, performance optimization, and code maintainability

Tech Stack: Node.js, Python, PostgreSQL, MongoDB, Docker, Ethers.js, Solidity, REST APIs

Web3 Development Intern

Moonstruck | Belgrade, Serbia (Remote) | Jun 2022 - Nov 2022

- Developed and deployed smart contracts in Solidity on Ethereum and Polygon networks (ERC20, ERC721, ERC1155 tokens)
- Contributed to Ethereum Name Service (ENS) integration project with development team
- Developed Chrome extension for ENS domain resolution
- Integrated Chainlink decentralized oracle network for real-time data feeds

Tech Stack: Solidity, JavaScript, Ethers.js, Chainlink, Chrome Extension APIs

Technical Projects

Indeksomator - Student Entry/Exit Tracking System

Developer (studentinovisad.org) | Dec 2024 - Feb 2025

- Worked in a team of 3 developers to create web app that replaced paper-based system
- Contributed to authentication system, database design, and real-time tracking functionality
- Deployed weekly updates based on user feedback
- Featured in national news sources (Danas, 021.rs) and adopted by dozens of faculties across Serbia

Technologies: Svelte, Node.js, Express.js, PostgreSQL, real-time systems

GitHub: <https://github.com/studentinovisad/indexomator>

BGPP - Unified Public Transport Platform

Personal Project | 2023 - Present

- Created open-source web app to display real-time public transport data for Belgrade, Novi Sad, and Niš
- Reverse-engineered official transport APIs using JADX, Burp Suite, and traffic analysis
- Implemented Node.js backend with optimized caching, cutting response size by 50-80% and ensuring consistent data formats
- Designed with a focus on privacy, requiring no user authentication or tracking
- Hosted on Docker, handling 10,000+ monthly requests

Technologies: JavaScript, Node.js, Express.js, REST APIs, Docker, Redis, Android reverse engineering

CS:GO Cheating Detection Research

Independent Research Project | 2021 - 2022

- Designed LSTM neural network to identify cheating patterns in CS:GO by analyzing player aiming and shooting behavior
- Trained on 100,000 sample dataset (50k legit, 50k cheating players), reaching 82.26% accuracy
- Presented research at IEEEESTEC and Petnica Science Center conferences

Technologies: Python, TensorFlow, LSTM/RNN, pandas, NumPy, Jupyter Notebook

GitHub: https://github.com/MikMik1011/petnica_csgo_ai_project

Awards & Achievements

1st Place - Serbian Cybersecurity Challenge | 2024

- Made it to national finals with the university team
- Participated in web exploitation, reverse engineering, cryptography, and forensics categories

3rd Place - Serbian Cybersecurity Challenge | 2023, 2025

- Made it to national finals three years in a row
 - Solved challenges in SQL injection, XSS, authentication bypass, binary analysis, and malware analysis
-

Education

Faculty of Sciences, University of Novi Sad

B.Sc. in Information Technologies | Oct 2022 - Present (Expected 2026) | Novi Sad, Serbia

- Relevant Coursework: Computer Networks, Cryptography, Operating Systems, Algorithms & Data Structures, Object-Oriented Programming, Database Systems

Petnica Science Center

Computer Science Program | Jul 2021 - Dec 2022 | Petnica, Serbia

- Comprehensive program including web development, machine learning, low-level programming, and scientific research methodology
 - Completed independent research project on CS:GO cheating detection using LSTM neural networks
-

Technical Skills

Programming Languages: Python, JavaScript/Node.js, Java, Kotlin, SQL, Bash scripting, C/C++

Backend & Web Development: Node.js, Express.js, Koa, Flask, REST APIs, WebSockets, Svelte

Blockchain & Web3: Solidity, Ethers.js, smart contract development, ERC20/721/1155 standards, Chainlink oracles, Ethereum, Polygon

Databases: PostgreSQL, MongoDB, Redis, database optimization, query performance tuning

DevOps & Tools: Docker, Git/GitHub, CI/CD pipelines, Linux (Arch/Kali), Nginx, SSH

Machine Learning: TensorFlow, Keras, scikit-learn, pandas, NumPy, LSTM/RNN architectures, Jupyter Notebook

Security: OWASP Top 10, secure coding practices, API security, reverse engineering, Burp Suite, Wireshark, mitmproxy, JADX, nmap

Languages: Serbian (native), English (fluent)

Leadership & Volunteering

Technical Director

Blokada INFO (Student Media) | Feb 2025 - Sep 2025

- Directed live broadcasts for student media outlet, overseeing 24-hour continuous streaming operations using OBS Studio
- Coordinated multi-camera production team for streaming to thousands of concurrent viewers
- Ensured broadcast system stability and high production quality during extended coverage sessions
- Supervised technical team and made live production decisions under pressure

Technical Skills Applied: OBS Studio, YouTube Live, multi-camera coordination, audio production, streaming infrastructure
