

Miša Stefanović

Backend Developer & IT Student

✉ contact@misa.st 🌐 [MikMik1011](#) in [mikmik1011](#)

Backend developer with 3+ years of experience shipping production systems used by thousands of users. I enjoy building open-source software that solves real, concrete problems, with a deep interest in backend architecture, DevOps, and cybersecurity. My stack revolves around Node.js and Python, with a strong focus on API design and secure systems architecture.

🎓 EDUCATION

B.Sc. Information Technologies

Faculty of Sciences,
University of Novi Sad

Oct 2022 – Present

GPA 9.67 / 10

Algorithms & Data Structures, Computer Networks, Cryptography, Database Systems, Operating Systems, OOP

Computer Science Program

Petnica Science Center

Jul 2021 – Dec 2022

Web development, machine learning, low-level programming, scientific research methodology

🏆 AWARDS

1st Place — SCC 2024

Serbian Cybersecurity Challenge: national finals

3rd Place — SCC 2023, 2025

National finals three years in a row; web exploitation, reverse engineering, cryptography, forensics, binary analysis

<> SKILLS

Backend

Node.js, Python, Express.js, Flask, REST APIs, WebSockets

Databases

PostgreSQL, MongoDB, Redis

DevOps

Docker, Git, CI/CD, Linux, Nginx, Traefik

Security

OWASP Top 10, Burp Suite, Wireshark, JADX, reverse engineering

🤝 VOLUNTEERING

Technical Director

Blokada INFO (Student Media)

Feb 2025 – Sep 2025

Led long-form live broadcasts (up to 24h), coordinating reporters, camera operators, and terrain teams for thousands of concurrent viewers.

🚀 TECHNICAL PROJECTS

Indeksomator

Dec 2024 – Feb 2025

SvelteKit, Node.js, Drizzle, PostgreSQL

Built with a team of 3 to replace a paper-based faculty entry system during the student blockade. Iterated weekly based on direct user feedback until adoption spread across dozens of Serbian faculties, earning coverage in national outlets (Danas, O21.rs).

🔗 Source code: github.com/studentinovisad/indexomator

BGPP

2023 – 2025

Node.js, Express.js, Docker, Redis

Reverse-engineered official transport APIs (JADX, Burp Suite) for Belgrade, Novi Sad, and Niš and built an open-source platform serving 10,000+ monthly requests with 50–80% response size reduction and no user tracking; retired after the official app blocked third-party API access.

CS:GO Cheating Detection Research

2021 – 2022

Python, TensorFlow, LSTM/RNN, pandas, NumPy

Designed and trained an LSTM neural network on a 100,000-sample dataset (50k legit, 50k cheating players) to detect cheating from aiming and shooting behavior, reaching 82.26% accuracy. Presented at IEEEESTEC and Petnica Science Center conferences.

🏢 PROFESSIONAL EXPERIENCE

Backend & Web3 Developer

Dec 2022 – Nov 2025

Moonstruck — Belgrade (Part-time, Remote)

Node.js, Python, PostgreSQL, MongoDB, Docker, Ethers.js, Solidity

- Developed and maintained backend systems for client projects including a crypto portfolio platform and hiking trail application
- Implemented Web3 features: NFT minting, soulbound tokens, and POAP certificates on Ethereum and Polygon
- Conducted security-focused code reviews emphasizing OWASP best practices, performance optimization, and maintainability
- Mentored interns and taught JavaScript fundamentals at Web 2.5 Academy, organized with Serbia Innovates and USAID

Web3 Development Intern

Jun 2022 – Nov 2022

Moonstruck — Belgrade (Remote)

Solidity, JavaScript, Ethers.js, Chainlink, Chrome Extension APIs

Deployed ERC20/ERC721/ERC1155 smart contracts on Ethereum and Polygon, contributed to an ENS integration project, and built a Chrome extension resolving ENS domains with live on-chain data via Chainlink oracles.
