

Miša Stefanović

Backend Developer & IT Student

contact@misa.st MikMik1011 mikmik1011

Backend developer with 3+ years of experience shipping production systems used by thousands of users. I enjoy building open-source software that solves real, concrete problems, with a deep interest in backend architecture, DevOps, and cybersecurity. My stack revolves around Node.js and Python, with a strong focus on API design and secure systems architecture.

EDUCATION

B.Sc. Information Technologies

Faculty of Sciences,
University of Novi Sad

Oct 2022 – Oct 2026

GPA 9.65 / 10

Algorithms & Data Structures, Computer Networks, Cryptography, Database Systems, Operating Systems, OOP

Computer Science Program

Petnica Science Center

Jul 2021 – Dec 2022

Web development, machine learning, low-level programming, scientific research methodology

AWARDS

1st Place — SCC 2024

Serbian Cybersecurity Challenge: national finals

3rd Place — SCC 2023, 2025

National finals three years in a row; web exploitation, reverse engineering, cryptography, forensics, binary analysis

SKILLS

Backend
Node.js, Python, Express.js, Flask, REST APIs, WebSockets

Databases
PostgreSQL, MongoDB, Redis

DevOps
Docker, Git, CI/CD, Linux, Nginx, Traefik

Security
OWASP Top 10, Burp Suite, Wireshark, JADX, reverse engineering

VOLUNTEERING

Technical Director

Blokada INFO (Student Media)

Feb 2025 – Sep 2025

Led long-form live broadcasts (up to 24h), coordinating reporters, camera operators, and terrain teams for thousands of concurrent viewers.

TECHNICAL PROJECTS

Indeksomator

Dec 2024 – Feb 2025

SvelteKit, Node.js, Drizzle, PostgreSQL

Built with a team of 3 to replace a paper-based faculty entry system during the student blockade. Iterated weekly based on direct user feedback until adoption spread across dozens of Serbian faculties, earning coverage in national outlets (Danas, 021.rs).

Source code: github.com/studentinovisad/indexomator

BGPP

2023 – present

Node.js, Express.js, SvelteKit, Docker, Redis

Reverse-engineered official transport APIs (JADX, Burp Suite) for Belgrade, Novi Sad, and Niš and built an open-source platform serving 10,000+ monthly requests with 50–80% response size reduction and no user tracking.

Source code: github.com/MikMik1011/bgpp Live: bgpp.misa.st

CS:GO Cheating Detection Research

2021 – 2022

Python, TensorFlow, LSTM/RNN, pandas, NumPy

Designed and trained an LSTM neural network on a 100,000-sample dataset (50k legit, 50k cheating players) to detect cheating from aiming and shooting behavior, reaching 82.26% accuracy. Presented at IEEESTEC and Petnica Science Center conferences.

PROFESSIONAL EXPERIENCE

Backend & Web3 Developer

Dec 2022 – Nov 2025

Moonstruck — Belgrade (Part-time, Remote)

Node.js, Python, PostgreSQL, MongoDB, Docker, Ethers.js, Solidity

- Developed and maintained backend systems for client projects including a crypto portfolio platform and hiking trail application
- Implemented Web3 features: NFT minting, soulbound tokens, and POAP certificates on Ethereum and Polygon
- Conducted security-focused code reviews emphasizing OWASP best practices, performance optimization, and maintainability
- Mentored interns and taught JavaScript fundamentals at Web 2.5 Academy, organized with Serbia Innovates and USAID

Web3 Development Intern

Jun 2022 – Nov 2022

Moonstruck — Belgrade (Remote)

Solidity, JavaScript, Ethers.js, Chainlink, Chrome Extension APIs

Deployed ERC20/ERC721/ERC1155 smart contracts on Ethereum and Polygon, contributed to an ENS integration project, and built a Chrome extension resolving ENS domains with live on-chain data via Chainlink oracles.
